- Exclude terrestrial gods.

No keyword

- Special comment inside block comments /**Same line special block comment B Different line special line comment A Different line special line comment B Different line special line comment C data** /A tricky special

Main

- This document is generated as an example output

Def

- The answer to life the universe and everything = 42

Statistics

- Use the fanciest order of tests

1. The Atlantic test procedures
2. The Pacific test procedures
3. The Arctic test procedures

- We use alpha=0.05 in all tests

Analysis

- Use the Milkyway default analysis for grouping of people The Milkyway has stars, this is a test for a single-line two star that is appended to the above in markdown / HTML

Regex

- Essential definitions for the text-parsing regex.

Testing

- Longer, multiple line comment test This is an example of a multiple-line two star SAS comment which will be copied in as a single consecutive comment, it is terminated only by the semicolon

Staging

- What needs to be done to move towards release.

Finalization

- How the end product will be determined...

Stata

- Just an example of Stata comments
- Stata comments can be parsed using the same notation as in SAS.
- A one-line Stata command
